---

At this point all I had was a rather peculiar green light bulb. I would have to hook up a signal source in order to see it in action [Cheap Cigarettes Outlet](#) . I did not have a great clue as to what signal level was required, so I connected a line-level audio signal and the tube did Expecting this

[Newport Cigarettes Coupons](#)

, I took the next step and connected the speaker outputs of an audio amplifier, and the tube sprung to life:

The magic eye is a general-purpose indicator, and can be used for anything that requires a proportional measurement. However, they are traditionally used in RF and audio applications, and I was happy to stick with that. I could not think of a suitable RF application off the top of my head, and that left me with the default choice of audio. As it turns out [Cigarettes Online USA](#) , the VU meter is the stereotypical example for hobbyist magic eye projects, so why buck tradition? I did determine, however, that if I made such a meter, it would have to be stereo. So I ordered a second unit, put the first unit on the shelf, and subsequently got involved with other business that occupied my attention for months.
