We received some money to purchase some inventory and get things moving a little bit quicker now that the details have been ironed out. Items have been ordered with the money and we have received everything as of today. The most important item being the last to arrive, of course. This was the LM8UU linear bearings. We need these to finish up the machines we are currently building. We will also start selling these soon in sets of 11 (maybe other sizes too?). The other items we ordered allowed us to assemble 10 sets of RAMPS 1.4 electronics. We've started selling kits [HERE](#) (only 1 left!) and the RAMPS 1.4 shield [HERE](#). Once we get the money in from previous sales we'll go purchase some 8mm Smooth Rods and finish up a few machines which will get things really rolling. We took great pictures of the RAMPS 1.4 soldering process, so we'll be able to get a tutorial up soon. Request a video of something and we'll make it.

If you are looking for anything just contact us on the contact form and we'll be able to get right back to you.
