

Slow progress

It's been a little while since we've posted an update, but we've been busy working on building up our inventory. Our online store will not be open until we have enough inventory to maintain some stock. We currently have a couple kits to assemble full machines as well as a few electronic kits. The kit for the full machine costs \$800 + shipping(about \$20) and the electronics kit costs \$190 + shipping(\$12). These shipping costs are approximate shipping to the US, we will be happy to ship the items anywhere it will just costs a little more for shipping and we will likely have to order a power cord for your area, but we'll take care of you and make sure you have what you need.

The tutorial section for assembling our RepRap kit has gotten some work done on it. The assembly has been broken up into sections that have a bill of materials for each section. The framework has all been built, now we just need to finish up the actual instructions and get pictures and/or videos put into the tutorials. Our model is almost the same as the prusa mendel iteration 2, with a few upgrades like endstops that will make the printing area larger.
